I am writing to apply for the Senior Navigation Engineer position at Falk Defence GmbH. Your work on precision guidance systems for defense applications, particularly in GNSS-denied environments, is directly relevant to my research and development focus on autonomous navigation and resilient positioning.

My technical work centers on building navigation and perception systems that function reliably under challenging conditions. I have developed a real-time vision-aid system using YOLOv8n-based object detection on edge hardware, achieving low-latency inference without cloud dependency. This involved designing sensor integration pipelines, optimizing for embedded performance, and validating results through field testing. The system operates fully offline, which required careful attention to localization accuracy and robustness.

In previous research, I have explored GPS-denied navigation techniques combining sensor fusion and vision-based approaches for UAV systems. This work included designing secure communication protocols and studying real-time data integrity mechanisms to prevent malicious interference. I am comfortable working across software, systems, and test teams to integrate new sensor modalities and evaluate navigation algorithms in practical scenarios.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in autonomous navigation and resilient systems can contribute to Falk Defence’s mission.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
