I am writing to apply for the Senior Test Engineer position at Falk Defence GmbH. Your work on advanced missile and launch systems for defense applications is technically demanding and strategically important, and I am interested in contributing to the rigorous testing and validation that ensures these systems perform reliably under real-world conditions.

Through my research and development work in autonomous systems and UAV technologies, I have gained practical experience in system-level testing, sensor integration, and performance validation. I have worked with hardware-software coordination, real-time data acquisition, and structured test documentation. These experiences have given me a solid foundation in planning and executing tests that verify both component-level functionality and overall system robustness.

One area that particularly interests me is the development of test procedures for complex systems operating under adversarial or constrained conditions. In my work on drone navigation and secure communication systems, I designed and conducted tests to evaluate system behavior under GPS-denied environments, network disruptions, and varying operational loads. This required careful test planning, data logging, and systematic root-cause analysis when failures occurred.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in systems testing and validation can support Falk Defence’s mission.

Sincerely,

Md Shahanur Islam Shagor
