I am writing to apply for the Embedded Software Engineer position at NBB Controls + Components GmbH. Your company's long-standing expertise in developing industrial radio remote control systems and electromechanical solutions for machine control is impressive. The opportunity to contribute to embedded systems that power real-world industrial applications aligns closely with my technical background and interests.

Through hands-on project development, I have gained practical experience in C++ programming and hardware-near software development. My work on the Wireless Vision-Aid for the Blind involved building a real-time assistive system using YOLOv8n-based object detection, where I developed the full pipeline from concept through implementation on embedded hardware. This required writing efficient C++ code for edge devices, optimizing for low latency, and conducting systematic testing on target platforms including Raspberry Pi and ESP32-CAM. I am comfortable working with structured development processes, version control with Git, and maintaining clear documentation throughout the development lifecycle.

One area that particularly interests me is the integration and testing of prototypes on target hardware. In my project work, I was responsible for bringing up PCBs and modules, troubleshooting communication issues between components, and validating system behavior under real-world conditions. I developed automated test cases to verify object detection accuracy and system responsiveness, and I am familiar with using measurement tools for debugging and performance analysis. This experience has given me a systematic approach to problem-solving and a strong appreciation for code quality and thorough documentation.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in embedded software development can contribute to NBB Controls + Components GmbH's continued innovation in industrial radio control solutions.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
