I am writing to apply for the Software Engineer, iOS Core Product role at Speechify. Your mission to remove reading barriers through accessible text-to-speech technology is genuinely impactful, and I appreciate the focus on building products that serve diverse learning needs.

While my professional background is in full-stack and backend development, I bring strong software engineering fundamentals that translate well into iOS development. I have hands-on experience with Git and CI/CD infrastructure, having deployed and maintained applications on Linux servers using Docker, Nginx, and automated pipelines. I understand SOLID principles and multithreading from designing concurrent systems and real-time communication engines using WebSockets and Socket.IO.

In previous work, I shipped production code regularly, maintained and enhanced complex application architectures, and participated in product discussions to shape roadmaps. I worked within dedicated product teams where clear communication and fast delivery were essential. I am comfortable making engineering decisions that balance speed with long-term maintainability.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my engineering approach can contribute to Speechify's iOS product.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
