I am writing to apply for the Senior Software Engineer, Windows/Desktop Applications role at Speechify. Your mission to remove reading as a barrier to learning is genuinely impactful, and I appreciate the focus on building accessible, inclusive software that reaches millions of users.

My engineering foundation includes C# and C++, which I have used in systems-level work and application development. I have experience designing responsive user interfaces, managing memory efficiently, and writing code that performs reliably under real-world conditions. These skills map directly to the Windows desktop development requirements outlined in this role.

In previous work, I have taken full ownership of features from initial design through deployment and maintenance. I have collaborated closely with designers, QA teams, and other engineers to shape product decisions and ensure quality across releases. I am comfortable diagnosing performance bottlenecks, resolving compatibility issues, and making architectural choices that balance short-term delivery with long-term maintainability.

One area that particularly interests me is accessibility. I understand that building software for users with disabilities requires more than compliance, it requires thoughtful design, careful testing, and a genuine commitment to inclusivity. I have experience working with diverse user requirements and am eager to contribute to Speechify's accessibility efforts on the Windows platform.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the Windows team at Speechify.

Sincerely,

Md Shahanur Islam Shagor
