I am writing to apply for the Senior Backend Engineer - Fiscalization role at SumUp. Your work in building compliant, scalable POS solutions for small businesses across Europe is something I find genuinely interesting, and I would welcome the opportunity to contribute to the Fiscalization team's mission.

My professional experience centers on backend development, API design, and building secure, reliable systems. I have worked extensively with PostgreSQL, AWS, Docker, and Linux servers, and I have designed role-based access control, integrated third-party services, and built real-time features using WebSockets. I also have practical experience with Kubernetes for container orchestration and deployment.

One area that particularly interests me is building integrations with external services and ensuring data integrity across distributed systems. In my previous work, I developed RESTful APIs and optimized database performance using indexing and caching strategies. I have also deployed and maintained applications on AWS EC2 with Nginx and Docker, and I am comfortable working with CI/CD pipelines.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
