I am writing to apply for the Working Student/Intern position in Automotive Testing & Vehicle Architecture at Verolt Technology Solutions GmbH. Your focus on embedded automotive software, functional safety, and cybersecurity aligns with my current research and academic background in software engineering.

Currently pursuing a Bachelor's in Software Engineering at Voronezh State University of Forestry and Technology, my research centers on secure UAV systems, decentralized coordination, and sensor fusion. This work has given me practical experience with object-oriented programming in C++ and Python, algorithm design for real-time systems, and systematic test evaluation.

One area that particularly interests me is test automation and data generation for vehicle architectures. In my research, I have designed algorithms for real-time object detection using YOLOv8 and developed low-latency streaming protocols for embedded systems. These projects required careful test case design, performance evaluation, and iterative debugging to ensure functionality and quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to contribute to Verolt's work on future vehicle architectures and test automation. I have attached my CV for your review and would welcome the opportunity to discuss how my background can support your team.

Sincerely,

Md Shahanur Islam Shagor
