I am writing to apply for the Scrum Master position at Haystack. The opportunity to coach engineering teams and drive Agile best practices within a defense-focused environment is something I find genuinely compelling.

My background in full-stack development has given me a practical, hands-on understanding of how engineering teams operate. Through my work delivering web applications with Laravel, Next.js, and React, I have participated in sprint planning, backlog grooming, and retrospectives. I understand the challenges developers face when requirements shift or technical debt accumulates, and I have experience helping teams stay focused on sprint goals while maintaining quality.

One area that particularly interests me is facilitating Agile ceremonies and writing clear user stories with well-defined acceptance criteria. In my previous work, I collaborated directly with stakeholders to translate business needs into actionable tasks, ensuring that both technical and non-technical team members had a shared understanding of what needed to be delivered. This experience has prepared me to support QA processes and requirement validation effectively.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
