I am writing to apply for the Product Manager position at Cambridge Spark. The role sits at the intersection of product strategy and technology delivery, which aligns with my experience building and shipping software products across full-stack development and cross-functional collaboration.

My professional background includes over four years of web and full-stack development, where I worked closely with product teams, stakeholders, and engineers to define features, prioritize work, and deliver reliable applications. At Explo-IT, I was responsible for translating business requirements into technical specifications, managing feature delivery timelines, and ensuring that product goals were met without compromising code quality or user experience.

One area that particularly interests me is the challenge of aligning technical execution with product vision. In previous work, I regularly facilitated communication between developers and non-technical stakeholders, helping to clarify requirements, resolve blockers, and keep projects moving forward. I am comfortable working in remote, distributed teams and have experience coordinating across time zones and cultures.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my product-oriented engineering background can contribute to Cambridge Spark’s goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
