I am writing to apply for the CYBER position with the Mississippi Army National Guard Biloxi Office. The role's focus on offensive cyberspace operations, computer network defense, and detecting malicious activity on the electromagnetic battlefield directly aligns with my research and development work in cybersecurity and secure communications.

My cybersecurity experience spans both academic research and practical system development. At Voronezh State University, my research has focused on secure UAV systems, including designing encrypted communication protocols using AES and secure key exchange mechanisms for drone-to-drone interaction. I have studied real-time data integrity and authentication mechanisms to prevent malicious command injection, and explored fault-tolerant system architectures under adversarial conditions. This work has given me a strong foundation in the principles of network defense and threat detection.

In previous project work, I developed OmniGuard V2X, a privacy-preserving blockchain framework for autonomous vehicle networks. This system integrates blockchain technology with advanced cryptography, including Zero-Knowledge Proofs and post-quantum cryptography, to ensure data integrity, anonymity, and resilience against cyber threats in Vehicle-to-Everything (V2X) communication. The project involved building tamper-proof communication layers using SHA3-256 chaining and implementing decentralized validation mechanisms, directly relevant to securing military-grade networks and cyber weapon systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cybersecurity and secure systems can contribute to the Guard's cyber force.
