I am writing to apply for the Chief Human Resources Officer (CHRO) position at NeuLife Rehabilitation. While my professional background is rooted in software engineering and AI, I bring a strong foundation in systems thinking, process optimization, and cross-functional collaboration that aligns with the strategic and operational demands of this role.

One area that particularly interests me is the challenge of building scalable organizational structures and workforce planning frameworks. In my work as a full-stack and AI engineer, I have designed complex systems that manage user roles, access controls, and data integrity across multiple stakeholders. This experience has given me a practical understanding of how to structure teams, define responsibilities, and ensure compliance with established policies.

Through my professional experience, I have led technical projects that required close coordination with diverse teams, clear communication of requirements, and meticulous attention to detail. I have managed project timelines, integrated feedback from multiple sources, and delivered solutions that meet both technical and business objectives. These skills translate directly to leading HR operations, managing employee relations, and driving organizational development initiatives.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in systems design, process improvement, and team collaboration can support NeuLife Rehabilitation’s people strategy and growth objectives.

Sincerely,

Md Shahanur Islam Shagor
