I am writing to apply for the Data Analyst Data Warehouse Analytics and BI role at OWL Services. Your work in building a modern data platform that drives company-wide reporting across operations, finance, dispatch, and inventory is exactly the kind of environment where I can contribute effectively.

My technical foundation includes strong SQL skills, experience with relational databases such as MySQL and PostgreSQL, and familiarity with cloud data platforms including AWS and Google Cloud. I have written and optimized complex queries involving CTEs, window functions, and performance tuning across large datasets. I also have hands-on experience using AI tools to accelerate analytics work, including model development and documentation.

What stands out to me about this role is the emphasis on reconciling disparate source systems and producing a harmonized view across multiple ERPs. In my previous work, I regularly worked with varied data sources, built data models, and ensured consistency across different schemas. I am comfortable digging into messy data, identifying anomalies, and turning it into something trustworthy for business stakeholders.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of your Data Warehouse and BI team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
