I am writing to apply for the IT-Administrator Systemintegration position at Riffbird Gmbh, working with Hofbakery. The opportunity to help maintain and develop a modern production IT environment in a company that values proactive problem-solving over ticket processing is exactly the kind of role I am looking for.

Through my professional experience, I have developed strong skills in Linux server administration, network infrastructure, and system monitoring. I have worked with Docker, Nginx, Apache, and CI/CD pipelines to deploy and maintain production applications. I am comfortable managing server environments, troubleshooting issues systematically, and ensuring system stability and security.

One area that particularly interests me is the emphasis on maintaining and developing network infrastructure in production-near areas. In previous work, I built a Real-Time Server Health Monitoring dashboard that tracked the availability, latency, and performance of multiple target URLs simultaneously. The system used Node.js, Express, Socket.IO, and Docker to stream live metrics to the browser, giving instant visibility into system health. This project gave me practical experience with real-time monitoring, server management, and Docker-based deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in system administration and infrastructure can contribute to the team at Hofbakery.

Sincerely,

Md Shahanur Islam Shagor
