I am writing to apply for the Customer Success Manager #2 position at CoCrafter (YC W24). Your mission to build the operating system for subcontractor management in the construction industry is a compelling example of how technology can transform a traditionally underserved sector. I am particularly interested in joining a Y Combinator-backed startup at this early stage and contributing directly to customer relationships and product direction.

My professional background is in full-stack software engineering, where I have spent over four years building and delivering web applications. In my most recent role at Explo-IT, I worked closely with stakeholders and clients to understand their needs, translate requirements into technical solutions, and ensure successful adoption. This experience has given me strong communication skills and the ability to build trust with decision-makers.

One area that particularly interests me is the opportunity to own a customer portfolio and manage the full lifecycle from onboarding to renewal. In my previous work, I was responsible for delivering projects end-to-end, which required proactive planning, clear communication, and the ability to identify risks early. I am comfortable leading conversations with business owners and helping them see the value of a product in depth.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in client-facing technical roles can contribute to CoCrafter’s growth.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
