I am writing to apply for the Senior Google Manager position at eFLY Marketplace Services GmbH. The opportunity to architect a comprehensive Google strategy from the ground up and build the technical and operational foundation for a growing marketplace is exactly the kind of challenge I seek.

My technical background includes hands-on experience with Google Cloud, Docker, Kubernetes, and monitoring tools such as Prometheus and Grafana. I have worked on deploying and maintaining scalable applications on cloud infrastructure, which directly connects to your need for someone who can define the appropriate tech stack and independently set up the necessary infrastructure.

In previous work, I built and deployed full-stack applications on Linux servers using Nginx, Apache, and Docker, with CI/CD pipelines for automated delivery. I have experience designing RESTful APIs, implementing authentication and role-based access control, and optimizing database performance. This combination of cloud infrastructure knowledge and software engineering gives me a practical foundation for building and scaling the Google ecosystem within your organization.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to eFLY’s growth.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
