I am writing to apply for the SAP Solution Architect position at Pertemps ERP. The opportunity to design modern enterprise architectures and guide S/4HANA transformations aligns with my technical background and interest in building scalable, secure systems.

My professional experience includes designing and implementing full-stack applications with Laravel, Next.js, and Node.js, along with integrating RESTful APIs, authentication systems, and third-party services. I have worked with MySQL, PostgreSQL, and Redis for data management, and deployed applications on Linux servers using Docker, Nginx, and CI/CD pipelines. These skills directly support the architectural decisions, technical governance, and solution design responsibilities described in your job posting.

One area that particularly interests me is the integration of AI capabilities into enterprise landscapes. Through my project work, I have built AI-powered features using OpenAI and Replicate APIs, and I understand how intelligent automation can enhance data transformation and user experience within SAP environments. I am also experienced with cloud platforms such as AWS and Google Cloud, and have used monitoring tools like Prometheus and Grafana to ensure system reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your clients' SAP transformation programs.

Sincerely,

Md Shahanur Islam Shagor
