I am writing to apply for the Research and Quality Assistant position at Cardiovascular Associates of America - CVAUSA. The opportunity to contribute to research and quality initiatives in a healthcare organization is one I find genuinely compelling.

My background combines software engineering with a research-oriented mindset. Through my academic work in software engineering and hands-on project development, I have developed strong skills in data management, systematic analysis, and process optimization. I am comfortable working with structured data, ensuring accuracy, and supporting quality-focused workflows.

In previous professional experience, I built and maintained web applications where data integrity and reliability were essential. I worked with databases such as MySQL and PostgreSQL, implemented automated testing, and followed structured development processes. These experiences have given me a practical understanding of how to maintain quality standards in technical environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can support the research and quality goals at Cardiovascular Associates of America.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
