I am writing to apply for the Web Developer position at Steward. Your focus on connecting digital strategy to association goals and understanding what truly drives member behavior resonates with my approach to building systems that serve real human needs rather than just displaying features.

With over 4 years of professional full-stack development experience, I specialize in building scalable web applications using Laravel, Next.js, React, and Node.js. My work spans the full delivery cycle from designing RESTful APIs and implementing authentication systems to creating responsive, accessible user interfaces with Tailwind CSS and modern JavaScript frameworks.

In my previous role at Explo-IT, I delivered production applications that required real-time features, secure payment integrations, and optimized database performance. I worked on Eloquent query tuning, caching strategies, and database indexing to ensure applications remained fast under load. I also deployed and maintained applications on Linux servers using Docker, Nginx, and CI/CD pipelines.

One project that reflects this technical range is a full-stack travel agency platform I built from the ground up. It supports multiple languages and currencies, integrates Google Maps and payment gateways, and runs on AWS infrastructure. The system was designed to be maintainable and scalable, not just functional.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the work at Steward.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
