I am writing to apply for the Differentiating Membership Offers position at Steward. Your focus on helping associations build unique, relevant membership offers that stand out in a crowded market resonates with my own approach to building digital platforms that deliver clear, measurable value to specific audiences.

What stands out to me about this role is the emphasis on relevance and uniqueness as the foundation of an effective membership offer. In my work as a full-stack developer, I have designed systems that require understanding user needs deeply and tailoring experiences accordingly. For example, I built an AI-powered real estate platform that used role-based access, subscription management, and personalized AI assistants to serve different user segments with relevant content and functionality.

In my professional experience as a Web Developer, I developed scalable applications using Laravel, Next.js, and MySQL, integrating authentication, payment gateways, and real-time features. I also worked on a multi-vendor e-commerce ecosystem that required coordinating different user roles and delivering customized experiences across web and mobile platforms. These projects taught me how to build systems that differentiate value based on user context and priorities.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building user-focused digital platforms can contribute to Steward's mission. Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
