I am writing to apply for the Director of Operations, MSP Service Delivery role at bdManagedIT. Your focus on building structure, accountability, and repeatable systems in a growing MSP environment aligns with how I approach technical operations and team coordination.

Through my professional experience in web development and technical operations, I have worked across the full lifecycle of service delivery. I understand how tickets, projects, escalations, and client commitments move through a system. My background includes building scalable applications, managing deployments, and ensuring that workflows are clear and teams stay accountable. I am comfortable staying close to the operational work without becoming the person who fixes every technical issue.

One area that particularly interests me is reducing dependency on key individuals by building repeatable systems and stronger team ownership. In previous work, I have designed and deployed applications using Laravel, Next.js, and Docker on Linux servers with CI/CD pipelines. I have also implemented authentication, role-based access control, and real-time features using WebSockets. This technical foundation allows me to ask informed questions, spot bottlenecks, and support better operational decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to bdManagedIT’s service delivery and operational maturity.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
