I am writing to apply for the Preparador/a de Oposiciones de Magisterio position at Ucademy. While my professional background is in software engineering, I have consistently worked on projects that involve creating structured learning experiences, developing training materials, and guiding users through complex processes. I am drawn to Ucademy's mission of helping future teachers succeed through high-quality online preparation.

Through my work as a full-stack developer, I have built platforms that require clear content organization, user guidance, and real-time interaction. For example, I developed a newsroom management dashboard where editors and writers collaborate under tight deadlines, and I created a multi-vendor e-commerce ecosystem that trains different user roles on system workflows. These experiences have given me a practical understanding of how to design instructional materials and support learners through structured processes.

One area that particularly interests me is the opportunity to help opositores build confidence and clarity as they prepare for their exams. In my previous roles, I have resolved user questions, created documentation, and provided step-by-step guidance to help people navigate unfamiliar systems. I believe this translates well to preparing students for the specific demands of teaching oposiciones.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the chance to discuss how my background in content creation, user guidance, and structured learning can contribute to Ucademy's mission. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
