I am writing to apply for the Senior Product Manager, Payments position at Distribusion Technologies. Your work in building the world's leading ground transportation marketplace and transforming into a global travel infrastructure provider is impressive, and I am particularly drawn to the opportunity to define the payment systems that sit between customers, merchants, and the global payments ecosystem.

My background is in full-stack engineering with a strong focus on building scalable, secure, and reliable systems. Over the past four years, I have developed and integrated payment gateways, including Stripe, into production applications, handling subscription plans, transaction flows, and role-based access control. I am technically fluent and comfortable working directly with engineers on API architecture, routing logic, and system design.

One area that particularly interests me is the challenge of designing for reliability, conversion, and scale in a high-volume transaction environment. In my professional experience, I have built RESTful APIs, optimized database queries for performance, and implemented real-time features using WebSockets. I have also worked with authentication systems, caching strategies, and deployment pipelines, which gives me a solid foundation for understanding the technical trade-offs involved in payment infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background and product-oriented mindset can contribute to Distribusion's Financial Services team.

Sincerely,

Md Shahanur Islam Shagor
