I am writing to apply for the Produktmanager Beschaffungs- & Vergabesoftware position at Administration Intelligence AG. Your focus on using AI to consolidate and modernize procurement processes for public-sector clients is a challenge I find genuinely compelling.

Through my work as a full-stack and AI engineer, I have developed a strong ability to bridge technical implementation with product thinking. I have built and shipped production software using Laravel, Next.js, Node.js, and React, and I have practical experience integrating AI/LLM features into real applications. For example, I developed an AI-powered financial platform that uses OpenAI models and AWS services to automate document generation, voice-to-text processing, and intelligent data analysis. This required understanding both the technical architecture and the user workflows.

One area that particularly interests me is your emphasis on using AI where it creates real value â such as automating repetitive steps in procurement processes â rather than applying it as a gimmick. In my projects, I have consistently focused on pragmatic AI integration: training assistants for specific domain tasks, processing images with Replicate API, and building role-based systems with subscription and payment flows. I am comfortable working across the full stack and making prioritization decisions based on user impact rather than feature count.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in software engineering and AI product development can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
