I am writing to apply for the Senior Product Engineer Maschinenbau position at ANGEHEUERT GmbH. Your focus on developing high-precision assemblies for medical technology, semiconductor, and analytical high-tech industries aligns with my interest in building technically demanding systems that require both engineering depth and practical implementation.

Through my professional experience in software engineering, I have developed a structured approach to evaluating technical requirements and translating them into economically viable solutions. I have worked on projects from the concept phase through to production-ready delivery, which has given me a solid understanding of how to balance technical feasibility with business constraints.

One area that particularly interests me is the technical coordination between different departments. In my previous roles, I acted as a technical interface between development, operations, and business teams, ensuring clear communication and informed decision-making. This experience has prepared me to manage the stakeholder coordination and cross-functional alignment that this role requires.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my engineering background can contribute to your team’s success.

Sincerely,

Md Shahanur Islam Shagor
