I am writing to apply for the Backend Developer Fintech position at Stockert. The idea of building a central payment platform that unifies multiple payment providers and services through a single interface is exactly the kind of technical challenge I enjoy. Reducing complexity in the payment space while maintaining flexibility and reliability aligns with my experience and interests.

My professional background is in backend development with Node.js, TypeScript, and Laravel. I have built scalable APIs, integrated third-party services, and designed systems that handle real-time data processing and secure transactions. I also work with MySQL, PostgreSQL, and Redis for data persistence and caching, and I am comfortable deploying applications on cloud infrastructure using AWS and Docker.

One area that particularly interests me is building robust processes for webhooks, routing, error handling, and transaction processing. In my previous work, I have implemented payment gateway integrations, designed role-based access control, and developed systems that required reliable asynchronous communication and secure data handling. I am used to collaborating with product, architecture, and security teams to make sound technical decisions and maintain high quality and performance standards.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background can contribute to the development of Stockert’s payment platform.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
