I am writing to apply for the Technischer Projektmanager Softwareentwicklung position at intedia GmbH. Your focus on delivering custom e-commerce solutions that are both technically sound and visually intuitive aligns well with my background in full-stack development and project coordination.

Over the past four years, I have worked as a web developer using PHP, Laravel, HTML, CSS, JavaScript, and MySQL to build and maintain production applications. In my role at Explo-IT, I was responsible for designing scalable web applications, integrating RESTful APIs, implementing authentication and role-based access control, and optimizing database performance. I also coordinated with stakeholders to define project scope, manage resources, and ensure timely delivery of features.

One project that closely matches your requirements is the multi-vendor e-commerce ecosystem I built using Laravel and MySQL. This platform connected customers, sellers, delivery agents, and administrators within a unified system. I handled the full development cycle from requirements analysis and database design to API development, testing, and deployment. The project required close collaboration with different user groups and clear communication to align technical implementation with business needs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to intedia’s projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
