I am writing to apply for the Group Controller (m/w/d) position at Proxy Temp GmbH, in direct placement for an established international technology company in the mechanical engineering sector based in Dietzenbach. The opportunity to take on a central role in group controlling within a manufacturing environment is one I find genuinely compelling.

My professional background is in software engineering, where I have spent over four years building data-intensive web applications and backend systems. Through this work, I have developed strong analytical capabilities, a structured approach to data management, and experience creating detailed reports and monitoring dashboards. I am accustomed to working with large datasets, tracking key metrics, and ensuring data integrity across complex systems.

In previous roles, I worked extensively with databases including MySQL and PostgreSQL, where I was responsible for query optimization, data modeling, and generating regular reports. I built real-time monitoring systems that tracked system health, availability, and performance metrics, presenting this data clearly through interactive dashboards. This experience has given me a practical understanding of how to collect, validate, and present financial and operational data accurately.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and data-driven approach can contribute to the controlling team at your client’s company.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
