I am writing to apply for the Director of Credit Risk position at Made Card. Your mission to build a financial platform that puts homeowners at the center, combining credit tools with AI-driven home management, is a compelling vision. I am particularly interested in how you are embedding financial products into the broader homeowner journey through strategic partnerships.

My technical foundation is in full-stack and AI engineering, where I have built systems that process complex data, manage user roles, and handle secure transactions. I have developed platforms with authentication, payment gateways, and real-time data pipelines. This experience gives me a practical understanding of how data flows through financial systems and how to build reliable, scalable infrastructure for decision-making.

One area that aligns well with this role is my work on an AI-powered financial application. I built the backend using Express, TypeScript, and MongoDB, integrated OpenAI for intelligent assistants, and used AWS for authentication, file storage, and PDF generation. The system handled user data securely, processed voice inputs via AWS Transcribe, and automated document delivery. This project required careful data handling, API design, and system reliabilityâ skills directly relevant to building and maintaining credit risk models and decision engines.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
