I am writing to apply for the Junior Supply Chain Analyst position at Helic & Co. The opportunity to work remotely with a detail-oriented team focused on data-driven decision-making aligns well with my analytical approach and technical background.

Through my work as a full-stack developer, I have built systems that rely on accurate data collection, real-time monitoring, and efficient reporting. I developed a real-time server health monitoring dashboard that tracked availability, latency, and system metrics across multiple targets using Socket.IO for live streaming. This project required careful attention to data accuracy and the ability to present complex information clearly.

My experience with MySQL, PostgreSQL, and MongoDB has given me strong skills in querying, filtering, and analyzing structured data. I am comfortable working with large datasets, identifying trends, and building tools that help teams make informed decisions. I also have hands-on experience with Linux servers, Docker, and deployment pipelines, which supports a reliable and efficient workflow.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my analytical skills and technical background can contribute to the Helic & Co team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
