I am writing to express my interest in contributing to Edirq's mission of building human-first systems grounded in belonging, emotional clarity, and thoughtful decision-making. While you currently have no open positions, I believe my background in software engineering and operations-focused project delivery could support your vision in meaningful ways.

Through my professional experience as a Web Developer, I have developed a practical understanding of what it takes to deliver reliable systems while keeping teams aligned and stakeholders informed. I have worked across product delivery, backend features, and frontend improvements, collaborating closely with engineering teammates and business stakeholders to ensure projects move forward smoothly and on schedule.

One area where I have consistently added value is in bridging the gap between technical execution and operational clarity. Whether it was managing deployment workflows, coordinating feature releases, or documenting system architecture for cross-functional teams, I have learned that thoughtful operations are just as important as clean code. I approach every project with the same principle: build systems that are maintainable, transparent, and designed for the people who use them.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. If there is any way I can contribute to Edirq's work, I would welcome the opportunity to connect.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
