I am writing to apply for the Mess- & Testingenieur / Test Engineer position at batterium GmbH. The opportunity to build End-of-Line testing standards and shape quality processes from the ground up aligns directly with my approach to engineering: structured, hands-on, and focused on measurable outcomes.

My technical foundation is in software engineering and system development, where I have built and deployed production systems that require rigorous testing, validation, and performance monitoring. I have experience designing test procedures, working with measurement tools, and ensuring that systems meet defined quality standards before release.

One area that particularly interests me is the development of standardized test processes. In my previous work, I was responsible for implementing quality checks, debugging complex systems, and maintaining documentation in both English and Bengali. I am comfortable working with international teams and communicating technical requirements clearly across different locations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my structured, quality-oriented mindset to batterium GmbH and contribute to building scalable testing standards for your products. I have attached my CV for your review and welcome the opportunity to discuss how I can support your team.

Sincerely,

Md Shahanur Islam Shagor
