I am writing to apply for the Senior Full-Stack Developer position at D4L data4life gGmbH. The work you are doing on secure, standards-compliant digital health solutions and the medical image annotation application in collaboration with Mount Sinai Health System is genuinely impactful. I want to contribute to building software that supports clinical researchers working with real patient data at scale.

My professional experience as a full-stack developer spans frontend and backend development. I have deep fluency in HTML, CSS, JavaScript, and TypeScript, with hands-on experience building interfaces in React and Next.js. On the backend side, I have worked with Go, Docker, and PostgreSQL, and I am comfortable designing relational database schemas and writing performant queries. I also have experience with Kubernetes and containerized deployments.

In previous roles, I designed and built scalable web applications where I contributed to architecture decisions, implemented authentication and role-based access control, integrated RESTful APIs, and deployed applications on Linux servers using Docker and Nginx. I have worked closely with designers and product teams to deliver user-centered software, and I have participated in code reviews to maintain code quality across the stack. Security has always been a consideration in my work, from authorization concepts to data protection.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team at Data4Life.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
