I am writing to apply for the Backend / DevOps Engineer position at spotixx GmbH. Your work in building secure, compliant data exchange for the regulated financial sector is a meaningful problem space, and I am interested in contributing to a team that focuses on sustainable growth and real impact.

My technical experience centers on backend development and infrastructure automation. I have worked with Docker, CI/CD pipelines, and cloud platforms including Google Cloud and AWS. I am comfortable extending existing Terraform configurations and maintaining automated delivery pipelines that keep deployments reliable and repeatable.

In previous work, I built and maintained backend services using Python and Node.js, with attention to clean data structures and readable code. I have also worked extensively with SQL databases like MySQL and PostgreSQL, which maps well to your BigQuery-based enrichment and ETL pipelines. My experience with Linux server administration, Nginx, and monitoring tools supports the operational side of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
