I am writing to apply for the Automation Engineer role at Finton Advisors by EFPINAI GmbH. Your focus on building AI-powered financial software that automates reporting and creates a single source of truth for data-driven teams is exactly the kind of problem I enjoy solving. The opportunity to own the technical health of operations and build durable workflows that eliminate manual processes aligns well with how I approach engineering.

Through hands-on project development, I have built automation systems that reduce repetitive work and improve reliability. One example is a Real-Time Server Health Monitoring dashboard where I used Python and Flask to collect system metrics, Socket.IO to stream live data to the browser, and Docker to containerize the entire stack. This project required writing clean scripts, debugging pipeline issues, and ensuring the system could recover from failures gracefully.

I am comfortable working with SQL and Python to investigate data issues, validate pipelines, and produce the numbers that operations teams rely on. I have experience deploying and maintaining applications on AWS, managing Linux servers with Nginx and Docker, and integrating real-time features. I approach debugging methodically by isolating variables, reading logs, and following problems through to a shipped fix.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Finton’s engineering team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
