I am writing to apply for the SAP SD Senior Solution Architect/ Senior Berater position at Nothegger Personalberatung. The opportunity to contribute to an S/4 HANA transformation project in a technology-driven, internationally connected organization is what draws me to this role.

My professional experience centers on designing and building scalable software systems. Over the past four years, I have worked extensively with Laravel, Node.js, and Next.js to develop full-stack applications that require robust architecture, secure data handling, and reliable performance. This background in system design and integration provides a strong foundation for understanding complex enterprise environments like SAP.

A key part of my work has involved creating and maintaining RESTful APIs, implementing role-based access control, and optimizing database performance through query tuning and caching. I have also integrated third-party services such as payment gateways and cloud storage, and deployed applications on Linux servers using Docker and Nginx. These responsibilities align well with the technical concept creation and cross-system interface work described in this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
