I am writing to apply for the Senior AI Implementation Consultant role at Lucid Labs. What you are building â a platform where AI agents handle operational decisions for Mittelstand companies â is exactly the kind of applied AI work I want to be part of. The combination of customer-facing consulting and hands-on building matches how I have been working across my projects.

My technical work has centered on integrating AI into real applications. I built an AI-powered financial app using OpenAI and AWS, where I trained AI assistants on custom datasets and implemented voice-to-text processing. I also developed an AI-based real estate platform using OpenAI and Replicate APIs, with role-based access, subscription plans, and automated workflows. These projects required me to understand business use cases, build prototypes, and deliver production-ready features.

In my professional experience as a Web Developer, I managed multiple client projects simultaneously, communicated directly with stakeholders, and translated requirements into working software. I led workshops, gathered feedback, and iterated quickly. This combination of technical building and client interaction is directly relevant to the 75% customer work and 15% prototyping that this role requires.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and look forward to discussing how I can contribute to Lucid Labs.

Sincerely,

Md Shahanur Islam Shagor
