I am writing to apply for the IMRO role at HCLTech. With a solid foundation in full-stack development and a track record of delivering scalable, production-ready systems, I am confident I can contribute effectively to your team.

Through my professional experience as a Web Developer at Explo-IT and DataSoft LTD, I have built and maintained web applications using Laravel, Next.js, and React. My work involved designing RESTful APIs, implementing authentication and role-based access control, optimizing database queries, and integrating third-party services such as payment gateways and cloud storage. I also deployed and maintained applications on Linux servers using Nginx, Apache, Docker, and CI/CD pipelines.

One project that reflects my approach is the multi-vendor e-commerce ecosystem I developed using Laravel and Flutter. This platform connected customers, sellers, delivery agents, and logistics teams through a unified backend with role-based access control, real-time notifications, and secure API communication. The system was designed for scalability and maintainability in a production environment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the needs of your team. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
