I am applying for the Data Analyst position at YO HR Consultancy. The role focuses on working with data, and I have practical experience building systems where data processing and analysis are central to the workflow.

Through my work on full-stack applications, I have designed and managed relational databases using MySQL and PostgreSQL, written optimized queries, and implemented data pipelines that support reporting and real-time monitoring. I have also worked with MongoDB for flexible data storage and retrieval.

One area that particularly interests me is building tools that turn raw data into actionable insights. In the Real-Time Server Health Monitoring project, I developed a dashboard that streams live system metrics using Socket.IO, tracks availability and latency across multiple endpoints, and provides instant visibility into system performance. This involved designing the data collection layer, structuring the database, and ensuring the frontend received accurate, up-to-date information.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my data and development experience can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
