I am writing to apply for the Digital Marketing Manager role with the client based in Tasmania. While my professional background is in software engineering, I bring a strong technical understanding of SEO, website performance, and data-driven optimization that directly supports this role's core focus.

Through my work as a full-stack developer, I have built and optimized websites with a focus on page speed, metadata, site structure, and schema â the same technical SEO foundations this role requires. I understand how search engines interpret content and how to structure websites for better organic visibility. My experience with analytics tools and performance monitoring gives me a practical edge in translating technical data into actionable SEO recommendations.

In previous web development roles, I have managed end-to-end website deployments, implemented responsive and SEO-friendly interfaces, and collaborated with teams to keep content current and aligned with branding. I am comfortable working autonomously, coordinating with external providers, and delivering measurable results on schedule.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and cover letter for your review. I would welcome the opportunity to discuss how my technical SEO and web optimization experience can contribute to the firm's online presence.

Sincerely,

Md Shahanur Islam Shagor
