I am writing to apply for the Swarming Software Engineer position at Quantum-Systems GmbH. Your work on autonomous multi-UAV coordination and edge-AI integration for aerial data collection is directly relevant to the kind of systems I have been building and researching.

Through research and development work, I have focused on autonomous systems, UAV coordination, and real-time edge processing. I have hands-on experience with C++ and Go for building low-level system components, and I have deployed algorithms on embedded Linux platforms using NVIDIA Jetson Nano. My work includes developing real-time object detection pipelines with YOLOv8, optimizing inference for performance on constrained hardware, and integrating sensor data for navigation tasks.

One area that particularly interests me is multi-vehicle routing and data fusion. In my research on secure UAV communication and GPS-denied navigation, I have worked on decentralized coordination concepts and sensor fusion techniques that combine vision-based and inertial data. I am comfortable working with simulation environments for algorithm development and then deploying those algorithms to physical embedded systems.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in autonomous systems and embedded software can contribute to the Swarming team at Quantum-Systems.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
