I am writing to apply for the Land- und Baumaschinenmechatroniker position at Riverstate Premium Recruiting. While my professional background is in software engineering, I bring strong technical problem-solving abilities, hands-on experience with embedded hardware, and a methodical approach to diagnostics and repair that aligns well with this role.

Through my work on autonomous systems and robotics projects, I have developed a solid understanding of electronics, sensor integration, and real-time system diagnostics. I have worked with microcontrollers such as ESP32 and Raspberry Pi, built communication protocols between hardware components, and debugged complex system failures systematically. This experience has given me a practical foundation in diagnosing technical problems and finding sustainable solutions.

One area that particularly interests me is the use of modern diagnostic systems for fault detection and repair. In my project work, I have designed systems that monitor hardware health in real time, process sensor data, and identify anomalies before they become critical failures. This analytical mindset translates directly to troubleshooting agricultural machinery and performing repairs according to manufacturer specifications.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
