I am writing to apply for the Frontend & UX Design internship at Think3DDD GbR. The opportunity to work on intuitive interfaces for medical technology applications aligns well with my background in full-stack development and my interest in building software that has real-world impact.

Through my professional experience as a Web Developer, I have spent over four years working with React, JavaScript, HTML, and CSS to build responsive, user-focused web applications. I am comfortable translating design concepts into functional code and have used Figma regularly for UI prototyping and collaboration with design teams.

One area that particularly interests me is the challenge of making complex technical tools feel simple and accessible to users. In previous projects, I have focused on performance optimization and usability improvements, ensuring that interfaces load quickly and behave predictably across different devices. I enjoy the iterative process of refining interfaces based on real user feedback.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my frontend development skills and UX awareness to Think3DDD, and I look forward to contributing to your team. My CV is attached for your review.

Sincerely,

Md Shahanur Islam Shagor
