I am writing to apply for the Land- und Baumaschinenmechatroniker position at Riverstate Premium Recruiting. While my professional background is in software engineering and autonomous systems, I bring strong technical problem-solving abilities, hands-on hardware integration experience, and a methodical approach to diagnostics that align well with the requirements of this role.

Through research and development work, I have built and deployed real-time embedded systems that combine hardware, sensors, and software. One relevant example is the Wireless Vision-Aid for the Blind (WVAB), a low-cost assistive system I developed using a Raspberry Pi, ESP32-CAM, and YOLOv8n-based object detection. This project required me to work with electronics, optimize performance under hardware constraints, and solve integration problems independently.

In this role, I see a clear connection between my experience with diagnostic systems and the responsibilities of maintaining and repairing agricultural machinery. I am comfortable working with modern diagnostic tools, analyzing technical problems systematically, and finding sustainable solutions. My work with C++, Python, and Linux has given me a strong foundation in understanding how complex systems operate and fail.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am interested in this position because it offers a stable environment with clear development paths and modern working conditions. I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
