I am writing to apply for the Kalkulator TGA position. While my professional background is in software engineering rather than technical building equipment, I bring strong analytical capabilities, technical precision, and a structured approach to problem-solving that are directly transferable to cost estimation and technical evaluation.

Through my work as a Web Developer, I have developed a methodical approach to analyzing requirements, estimating effort, and optimizing complex systems. I regularly work with data, databases, and technical documentation, and I am comfortable with the kind of detailed cost analysis and planning that this role requires.

One area that particularly interests me is the opportunity to work on large-scale construction projects in Berlin. The chance to contribute to projects valued between 20 and 40 million euros, while learning a new technical domain, is exactly the kind of challenge I am looking for. I am confident that my ability to quickly learn new technical fields will serve me well in mastering TGA calculation.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical skills and willingness to learn can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
