I am writing to apply for the Product Owner - AI Fokus role at Simplifier AG. The opportunity to contribute to a KI-native digitalization platform aligns well with my background in software engineering and applied AI.

Through hands-on project development, I have built AI-powered systems that combine natural language processing, voice interaction, and automated workflows. One example is an AI-powered financial application where I integrated OpenAI's latest models, implemented voice-to-text transcription using AWS Transcribe, and built automated PDF generation pipelines. This experience has given me practical insight into how AI can be used as a tool to solve real user problems and improve product value.

In previous professional experience, I worked as a Web Developer where I collaborated closely with teams to define features, prioritize user stories, and deliver production-ready applications. I am comfortable working with agile methodologies, conducting market research through user feedback, and making data-driven decisions to improve product performance. I also have experience presenting demos and communicating product updates to stakeholders.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to Simplifier's product vision.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
