I am writing to apply for the Fullstack Developer position. With professional experience in TypeScript, Node.js, and Next.js, I build scalable full-stack applications that handle real-world complexity.

In my work as a Web Developer, I have delivered production applications using TypeScript, Node.js, and Next.js. I have built RESTful APIs, implemented authentication and role-based access control, and worked with both SQL and NoSQL databases. I also have experience with ETL-like data processing and real-time features using WebSockets and Socket.IO.

One project that reflects this is Smart Finance, a full-stack personal finance platform built with Next.js 16, TypeScript, Tailwind CSS, and Prisma ORM. It features 16 finance modules, real-time updates via Server-Sent Events, Docker-based deployment, and a modular architecture that reduced code duplication. I designed the API integration pattern and state management approach myself.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background aligns with your team’s needs.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
