I am writing to apply for the Manager of People Operations role at Karbon. Your focus on building AI-native workflows and agentic systems as the foundation of People Operations aligns directly with how I approach operational design. Karbon's position as a leader in AI-powered practice management software for accounting firms, with a globally distributed team across six countries, makes this an exciting opportunity to apply my technical and systems-thinking skills in a high-impact environment.

My work has centered on designing and deploying AI-augmented systems that automate routine operational tasks. I have built real-time monitoring dashboards using Node.js, Socket.IO, and React that stream live metrics without human polling. I have developed API-driven architectures with role-based access control, integrated third-party services, and implemented secure authentication flows. These projects required me to think in terms of agent-readiness and automation-first design, which is exactly the mindset this role demands.

One area where I have direct experience is building systems that reduce manual intervention. I created a server health monitoring platform that pushes live data to connected clients, eliminating the need for manual checks. I have also developed full-stack applications with Laravel and Next.js that include automated reporting, real-time notifications, and workflow orchestration. These systems were designed to run with minimal human oversight, which I understand is a core expectation for this position.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my approach to AI-driven operations can support Karbon's People team.

Sincerely,

Md Shahanur Islam Shagor
