I am writing to apply for the HPC Engineer Services position at Rescale. Your work in digital engineering and intelligent automation across aerospace, energy, and life sciences is impressive. I am particularly interested in how Rescale combines HPC with AI-driven workflows to solve complex engineering challenges.

Through my software engineering experience, I have developed strong skills in Linux system administration, containerization with Docker and Kubernetes, and cloud infrastructure on AWS and Google Cloud. I have worked with monitoring and observability tools including Prometheus and Grafana, and have built CI/CD pipelines for automated deployment. My experience with Python scripting and automation aligns well with the technical requirements of this role.

One area that particularly interests me is optimizing software performance in containerized and distributed environments. In previous work, I built a real-time server health monitoring system that tracked availability and latency across multiple endpoints using Socket.IO for live streaming, with a fully Dockerized production setup behind Nginx. This project required deep knowledge of system metrics, process management, and reliable deployment practices.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in systems engineering, automation, and cloud infrastructure can contribute to Rescale’s mission.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
