I am writing to apply for the Technologie Architekt - Cloud-Innovation role at Accenture. The opportunity to shape cloud strategies and build hands-on prototypes for enterprise clients aligns directly with the kind of technical work I enjoy most.

My experience centers on cloud-native engineering and platform development. I have worked with Node.js, Go, and React to build microservice architectures, and I have deployed containerized applications using Docker and Kubernetes on AWS and Google Cloud. I have also set up CI/CD pipelines and monitoring stacks with Prometheus and Grafana, ensuring that systems remain observable and reliable in production.

One area that particularly interests me is the intersection of cloud architecture and AI. I have built full-stack applications that integrate AI agents using OpenAI and Replicate APIs, combining deterministic backend logic with LLM-based workflows. This experience gives me a practical understanding of where agentic systems are production-ready today and where they still require careful architectural boundaries.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background fits the needs of your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
