I am writing to apply for the Freelance Designer role at Celsius Studios. Your studio's focus on creating refined brand identities, websites, and marketing materials through research and craftsmanship aligns with how I approach design and development work.

Through my professional experience as a Web Developer, I have built responsive, user-centered interfaces using HTML, CSS, JavaScript, React, and Next.js. I work with Figma for design prototyping and collaboration, and I apply UX thinking to every project I deliver. My background includes creating clean, accessible layouts that work across devices and meet both user needs and business goals.

One area that particularly interests me is the intersection of design and technical implementation. In previous projects, I have taken designs from wireframe to production, ensuring visual consistency, performance, and usability. I am comfortable working with design systems, translating brand guidelines into functional interfaces, and iterating based on feedback.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and portfolio for your review. I would welcome the opportunity to contribute to your creative projects and would be happy to discuss how my background can support your studio's work.

Sincerely,

Md Shahanur Islam Shagor
